## Other Resources Available

- Full-text database, some index-only titles
- 430+ full-text active journals, 580+ full-text journals
- 11,300+ dissertations from 400 universities
- Covers nursing and all allied health fields
- For research, undergraduate study and professional development

# The ProQuest Psychology Portfolio

- 390+ full-text active journals, 520+ full-text journals
- Majority of titles indexed in PsycINFO
- Covers Psychology and other related fields
- Ideal for students and mental health professionals
- Other complementary Psychology resources available

- 420+ active full-text titles, 4,500+ full-text Health Care Management dissertations
- Subject coverage: hospitals, insurance, law, statistics, business management, personnel management, health economics, ethics, public health administration, etc
- Titles listed in:
  - Yale University Core Public Health Journals Project (Health Services & Administration)
  - US National Library of Medicine's core list of journals in health economics

[Dissertations & Theses](#) هدایت می شوید

Doctoral dissertations and master's theses are a vital fund of scholarship for any discipline. The massive body of work available through ProQuest Dissertations & Theses (PQDT) represents the most comprehensive source of academic research in the world.

Coverage: varies

[Dissertations & Theses: Full Text](#) (ID 15119)

With more than 2.4 million entries, the ProQuest Dissertations & Theses (PQDT) database is the most comprehensive collection of dissertations and theses in the world. UMI offers over 2 million titles for purchase in microfilm or paper formats. More than 930,000 are available in PDF format for immediate free download, and an average of 2,000 new PDFs are added to the database each week. [more info...](#)

## Role of actions of **calcium antagonists** on efferent arterioles-with special references to glomerular hypertension

*Koichi Hayashi, Yuri Ozawa, Keiji Fujiwara, Shu Wakino, et al.* [American Journal of Nephrology](#). Basel: [Jul/Aug 2003](#). Vol. 23, Iss. 4; pg. 229

### Abstract (Summary)

Although **calcium antagonists** are used as a first-line antihypertensive agent, controversy attends the renal microvascular effects of **calcium antagonists**. Since **calcium antagonists** elicit predominant vasodilation of the afferent arteriole, they might ostensibly aggravate glomerular hypertension. Recently, novel types of **calcium antagonists** have been developed, some of which are reported to dilate efferent as well as afferent arterioles. The present review attempted to characterize the renal microvascular action of **calcium antagonists**, and evaluated the consequences of renal injury following the treatment with these antagonists. In contrast to predominant afferent arteriolar action of conventional **calcium antagonists** (e.g. nifedipine, nicardipine, amlodipine and diltiazem), novel antagonists (e.g. manidipine, nilvadipine, benidipine and efonidipine) potently dilated both afferent and efferent arterioles. The vasodilator action on efferent arterioles appears to be mediated in part by the blockade of T-type calcium channels, particularly through the inhibition of the intracellular calcium release mechanism. The comparison of the anti-proteinuric action of **calcium antagonists** in subtotaly nephrectomized rats showed that efonidipine and enalapril, both possessing vasodilator action on efferent arterioles, exerted more prominent action than other **calcium antagonists**. Finally, in patients with chronic renal disease, a 48-week treatment with efonidipine reduced proteinuria, and this effect was seen even when the mean arterial blood pressure failed to reach below 100 mm Hg. In conclusion, although **calcium antagonists** potently inhibit afferent arteriolar constriction, efferent arteriolar responses to these agents vary, depending on the types of **calcium antagonists** used. These divergent actions of these agents on the efferent arteriole may alter differently the glomerular hemodynamics, and could affect the final outcome of underlying renal diseases.
