non-specific interactions. The effect of temperature on the different volumetric properties studied was also analyzed. In addition, the volumetric thermal expansion coefficients were calculated. The Jouyban-Acree model was used for density and molar volume correlations of the mixtures at the different experimental temperatures. The mean relative deviations between experimental and calculated data are 0.04 ± 0.03 and 0.04 ± 0.05 , respectively, for the density and molar volumes, using the minimum number of data points, the Jouyban-Acree model can predict density and molar volume with acceptable accuracies (0.06 ± 0.04 and 0.08 ± 0.05 , respectively). © Springer Science+Business Media, LLC 2012.
